

VPN (Virtual Private Network) at the Free University of Bolzano/Bozen

Infos regarding the usage of VPN

<http://www.unibz.it/en/ict/ComputerInternet/network/vpn/default.html>

Instructions for Windows 2000, XP, VISTA and 7 - 32bit and 64bit

<http://www.unibz.it/en/ict/ComputerInternet/network/vpn/InstallationWindows.html>

Instructions for MacOS X 10.4

<http://www.unibz.it/en/ict/ComputerInternet/network/vpn/InstallationMacOSX.html>

Instructions for MacOS X 10.6

There is no need to install a Client, simply download and install (doubleclick) the following file:

[unibz.networkconnect.zip](#)

Instructions for Linux vpnc Client (recommended)

1. Install vpnc

```
sudo aptitude install vpnc
```

2. Create configuration file unibz.conf. Download from here: [unibz.conf](#)

IPSec obfuscated secret needs to be on a single line.
Replace <your-windows-login> with your username.

```
sudo vi /etc/vpnc/unibz.conf
```

```
#####
```

```
IPSec gateway vpn.unibz.it
```

```
IPSec ID Unibz
```

```
IPSec obfuscated secret
```

```
06294C134E0BEBDA4B449B56BFD305D35D12DABF4044EDB6794926C2CA6D5AEDFE6342DF190E  
566EB11215DDC1591D5CB6ABEBEB593693C6D0B2077D78034B6AFEEA3221E77F4
```

```
C9858DD711AA8DE58F6
Xauth username <your-windows-login>
#####
```

apply this rights:

```
sudo chmod 600 /etc/vpnc/unibz.conf

sudo chown root.root /etc/vpnc/unibz.conf
```

```
sudo ls -l /etc/vpnc/unibz.conf
-rw----- 1 root root 250 2009-05-02 15:54 /etc/vpnc/unibz.conf
```

3. Start vpnc

```
sudo vpnc-connect --domain unibz unibz
```

This will first ask for your sudo password and then your <unibz-password>

4. Stop vpnc

```
sudo vpnc-disconnect
```

Possible errors

If you get the following error: **vpnc-connect: no response from target**
try adding the line below to your configuration file (unibz.conf)

NAT Traversal Mode cisco-udp

When one attempts to connect to their VPN after installing and configuring vpnc on Ubuntu Oneiric, the following error occurs:

```
root@ubuntu:~# vpnc-connect
Error: either "to" is duplicate, or "ipid" is a garbage.
```

It appears that the Ubuntu package vpnc comes with an old version of vpnc-script.
This script is what sets up all the addresses and routes for you. The OpenConnect project provides an updated / revised release of this script. Download the latest copy from [here](#).
Replace the vpnc-script script that comes with the Ubuntu vpnc package: /etc/vpnc/vpnc-script

Instructions for Linux Cisco AnyConnect Client

Installation

1. Open with your browser (tested with firefox 11.0) the following URL:

<https://vpn.scientificnet.org>

2. Enter your Username and password, then press **Login**

3. A "Warning - Security" Windows opens: This will install the Cisco AnyConnect Client in /opt/cisco of your Platform.

4. Press **Run** on the "Warning - Security" Window

5. In order to install Cisco AnyConnect, Admin (sudo) rights are required; a Window opens, enter your local password.

6. The Cisco AnyConnect is installed and running, you can close the URL.

Launching Cisco AnyConnect GUI

This allows you to connect and disconnect the VPN service.

```
/opt/cisco/anyconnect/bin/vpnui
```

Please note the vpnagentd must be running for this

- `ps auxww | grep vpn`

```
root      1759  0.0  0.3 17984  7644 ?        S      12:58   0:00  
/opt/cisco/anyconnect/bin/vpnagentd
```

Launching Cisco AnyConnect NON-GUI

This allows you to connect and disconnect the VPN service.

- `/opt/cisco/anyconnect/bin/vpn`

```
Cisco AnyConnect Secure Mobility Client (version 3.0.5080) .
```

>> notice: Establishing VPN...
>> state: Connected
>> notice: Connected to vpn.unibz.it.
VPN>exit
```

Uninstalling the AnyConnect Client

The client comes with an uninstallation script

- `sudo /opt/cisco/vpn/bin/vpn_uninstall.sh`

However it doesn't actually uninstall everything properly, it removes files but leaves behind directories.

You can clean up what it leaves behind by deleting the directory `/opt/cisco/` and `/opt/.cisco/`

- `sudo rm -r /opt/cisco /opt/.cisco`

Per-user configuration is stored in your home directory in a file called `.anyconnect`

Shrew Soft VPN Client Instructions for 32 or 64 bit version of Windows 2000, XP, Vista and 7 (recommended)

1. Go to <http://www.shrew.net/home> and download latest stable release of Shrew Soft VPN Client for Windows: <http://www.shrew.net/download/vpn>
2. Download unibz profile (need to login with unibz login&password)
<https://pro.unibz.it/vpn/profiles/unibz/Free%20University%20of%20Bozen-Bolzano.zip>
3. Install Shrew Soft VPN Client for Windows
4. Start Shrew Soft VPN Client, unzip unibz profile and Import in VPN client
