

# VPN (Virtual Private Network) at the Free University of Bolzano/Bozen and EURAC

## Infos regarding the usage of VPN

<http://www.unibz.it/en/ict/ComputerInternet/network/vpn/default.html>

## Instructions for Windows 2000, XP, VISTA and 7 - 32bit and 64bit

<http://www.unibz.it/en/ict/ComputerInternet/network/vpn/InstallationWindows.html>

## Instructions for MacOS X 10.4

<http://www.unibz.it/en/ict/ComputerInternet/network/vpn/InstallationMacOSX.html>

## Instructions for MacOS X 10.6

There is no need to install a Client, simply download and install (doubleclick) the following file:

[unibz.networkconnect.zip](#)

## Instructions for Linux vpnc Client (recommended)

### 1. Install vpnc

```
sudo aptitude install vpnc
```

### 2. For Unibz:

- Create configuration file unibz.conf. Download from here: [unibz.conf](#)

### 2.a For Eurac:

- Create configuration file eurac.conf. Download from here: [eurac.conf](#)

IPSec obfuscated secret needs to be on a single line.

Replace <your-windows-login> with your username.

For Unibz:

```
sudo vi /etc/vpnc/unibz.conf
```

```
#####  
IPSec gateway vpn.unibz.it  
IPSec ID Unibz  
IPSec obfuscated secret  
06294C134E0BEBDA4B449B56BFD305D35D12DABF4044EDB6794926C2CA6D5AEDFE6342DF190E  
566EB11215DDC1591D5CB6ABEBEB593693C6D0B2077D78034B6AFEEA3221E77F4  
C9858DD711AA8DE58F6  
Xauth username <your-windows-login>  
#####
```

apply this rights:

```
sudo chmod 600 /etc/vpnc/unibz.conf  
  
sudo chown root.root /etc/vpnc/unibz.conf  
  
sudo ls -l /etc/vpnc/unibz.conf  
-rw----- 1 root root 250 2009-05-02 15:54 /etc/vpnc/unibz.conf
```

For Eurac:

```
sudo vi /etc/vpnc/eurac.conf  
  
#####  
IPSec gateway vpn.scientificnet.org  
IPSec ID Eurac  
IPSec obfuscated secret  
56A1CD68CC3AD33B48DB0F727ADDBC0A354DE3287D15C8526ED4CEDE4BC2ACDD1BB2460BC235  
4671A405F6150EA7C294C4DBC4CF9FFE45873BECAD3A2A738C5053BE34F709D592B50AD5BC47  
2CDFF350  
Xauth username <your-windows-login>  
#####
```

apply this rights:

```
sudo chmod 600 /etc/vpnc/eurac.conf  
  
sudo chown root.root /etc/vpnc/eurac.conf  
  
sudo ls -l /etc/vpnc/eurac.conf  
-rw----- 1 root root 250 2009-05-02 15:54 /etc/vpnc/eurac.conf
```

### 3. Start vpnc

For Unibz:

```
sudo vpnc-connect --domain unibz unibz
```

This will first ask for your sudo password and then your <unibz-password>

For Eurac:

```
sudo vpnc-connect --domain eurac eurac
```

This will first ask for your sudo password and then your <eurac-password>

#### 4. Stop vpnc

```
sudo vpnc-disconnect
```

## Possible errors

If you get the following error: **vpnc-connect: no response from target** try adding the line below to your configuration file (unibz.conf)

### NAT Traversal Mode cisco-udp

---

When one attempts to connect to their VPN after installing and configuring vpnc on Ubuntu Oneiric, the following error occurs:

```
root@ubuntu:~# vpnc-connect
Error: either "to" is duplicate, or "ipid" is a garbage.
```

It appears that the Ubuntu package vpnc comes with an old version of vpnc-script. This script is what sets up all the addresses and routes for you. The OpenConnect project provides an updated / revised release of this script. Download the latest copy from [here](#). Replace the vpnc-script script that comes with the Ubuntu vpnc package: /etc/vpnc/vpnc-script

## Decode Group Password

[cisco vpnclient password decoder](#)

# Instructions for Linux Cisco AnyConnect Client

## Installation

1. Open with your browser (tested with firefox 11.0) the following URL:

<https://vpn.scientificnet.org>

2. Enter your Username and password, then press **Login**

3. A "Warning - Security" Windows opens: This will install the Cisco AnyConnect Client in /opt/cisco of your Platform.

#### 4. Press **Run** on the “Warning - Security” Window

5. In order to install Cisco AnyConnect, Admin (sudo) rights are required; a Window opens, enter your local password.

6. The Cisco AnyConnect is installed and running, you can close the URL.

### Launching Cisco AnyConnect GUI

This allows you to connect and disconnect the VPN service.

```
/opt/cisco/anyconnect/bin/vpnui
```

Please note the vpnagentd must be running for this

- `ps auxww | grep vpn`

```
root      1759  0.0  0.3 17984  7644 ?        S   12:58   0:00  
/opt/cisco/anyconnect/bin/vpnagentd
```

### Launching Cisco AnyConnect NON-GUI

This allows you to connect and disconnect the VPN service.

- `/opt/cisco/anyconnect/bin/vpn`

```
Cisco AnyConnect Secure Mobility Client (version 3.0.5080) .
```

VPN>exit
```

## Uninstalling the AnyConnect Client

The client comes with an uninstallation script

- `sudo /opt/cisco/vpn/bin/vpn_uninstall.sh`

However it doesn't actually uninstall everything properly, it removes files but leaves behind directories.

You can clean up what it leaves behind by deleting the directory `/opt/cisco/` and `/opt/.cisco/`

- `sudo rm -r /opt/cisco /opt/.cisco`

Per-user configuration is stored in your home directory in a file called `.anyconnect`

## Shrew Soft VPN Client Instructions for 32 or 64 bit version of Windows 2000, XP, Vista and 7 (recommended)

1. Go to <http://www.shrew.net/home> and download latest stable release of Shrew Soft VPN Client for Windows: <http://www.shrew.net/download/vpn>
2. Download unibz profile (need to login with unibz login&password)  
<https://pro.unibz.it/vpn/profiles/unibz/Free%20University%20of%20Bozen-Bolzano.zip>
3. Install Shrew Soft VPN Client for Windows

#### 4. Start Shrew Soft VPN Client, unzip unibz profile and Import in VPN client
