BZ10M: Bolzano Roads Network Spatial Table

Import

imp user/pass file=/bz10m/roads_spatial-1.0.dmp full=y

Current version: 1.0 (9/26/2007)

The table will be called BZ_ROADS.

This is the TeleAtlas table we got from the municipality on July the 18, 2007. The table contains linestrings (in GEOMETRY column), which represent roads segments; In Network Data Model they become links.

Index

The imported table will have its index created automatically. Index is needed in case you want to use any spatial operators (such as finding all segments within distance, retrieving bounding rectangle etc.)

Columns of the table

We are working on the meanings of the columns:

BZ ROADS:

ID	long integer, the ID for each road segment
FEATTYP	?
FT	?
F_INCTID	?
F_INCTTYP	?
T_INCTID	?
T_INCTTYP	?
PJ	?
METERS	Length of a segment in meters, rounded up to the hundredth part. See LENGTH
FRC	?
NETCLASS	?
NETBCLASS	?
NET2CLASS	?
NAME	Name of the street/highway number
NAMELC	?
SOL	?
NAMETYP	?
CHARGE	?
ROUTENUM	Highway number
RTETYP	?
