

In order to move a wiki into another one, you have to move:

data/pages/thing to data/pages/projects/thing data/media/thing to data/media/projects/thing  
data/attic/thing to data/attic/projects/thing

Upgrade then move stuff. That will split the changelog into \*.changes files in the data/meta/ directory.  
Just remember to also move:

data/meta/thing to data/meta/projects/thing
