

Verify and Sign Documents

In order to sign or verify a pdf document you need an Aruba digital Signature. Talk to the CS-Secretariat (M. Gesualdo) for this. Unibz provides a remote call for authentication.

Verify Documents (open a p7m file)

Download arubasign from <https://www.pec.it/download-software-driver.aspx> Software section for your operating system.

To open a p7m signed file use **arubasign**.

1. launch from terminal: arubasign
2. select Verify and choose your p7m file (files type: signed files)
3. select Open Content (3rd item down) to simply open the file or
4. select Save Content (4th item down) if you want to save the file

Sign pdf Document
